TEST REPORT
IEC 62040-1
Uninterruptible power systems (UPS) –
Part 1: General and safety requirements for UPS

Report Number.....:	BL-DG2060127-B02
Date of issue.....:	July 2, 2020
Total number of pages.....:	61
Name of Testing Laboratory preparing the Report.....:	Shenzhen BALUN Technology Co., Ltd
Applicant's name.....:	Shenzhen SOFAR SOLAR Co., Ltd.
Address.....:	401, Building 4, AnTongDa Industrial Park, District 68, XingDong Community, XinAn Street, BaoAn District, Shenzhen, China.
Test specification:	
Standard.....:	IEC 62040-1: 2017
Test procedure.....:	Commissioned test
Non-standard test method.....:	N/A
Test item description.....:	Hybrid Inverter
Trade Mark.....:	
Manufacturer.....:	Same as the applicant
Model/Type reference.....:	HYD 10KTL-3PH, HYD 15KTL-3PH, HYD 20KTL-3PH, HYD 5KTL-3PH, HYD 6KTL-3PH, HYD 8KTL-3PH
Ratings.....:	See copy of marking label and model list.
Testing Laboratory.....:	Shenzhen BALUN Technology Co., Ltd
Testing location/ address.....:	Room 104, 204, 205, Building 1, No. 6, Industrial South Road, Songshan Lake District, Dongguan, Guangdong, China
Tested by (name, function, signature).....:	Colin Chen /Engineer 
Approved by (name, function, signature).....:	Simon Qi /Chief Engineer 
<p>-Note: The only difference between the EUT (test samples in this report) and testing sample of report BL-DG2030075-B01, which was issued by Shenzhen BALUN Technology Co., Ltd. on May 25, 2020 as below:</p> <ol style="list-style-type: none"> 1. Add three new models: HYD 5KTL-3PH, HYD 6KTL-3PH, HYD 8KTL-3PH. 2. Add electrical datas of the three models. 3. Add HYD 8KTL-3PH model Thermal testing. 4. Add two reporting capacitors and one Relay on output board. <p>And others hardware circuit and software were all the same. So the other test data originate from the report BL-DG2030075-B01, which was issued by Shenzhen BALUN Technology Co., Ltd. on May 25, 2020</p>

<input checked="" type="checkbox"/> The product fulfils the requirements of IEC EN 62040-1 : 2017 / EN 62040-1 : 2019	

Copy of marking plate

The artwork below may be only a draft. The use of certification marks on a product must be authorized by the respective NCBs that own these marks.

1. The above markings are the minimum requirements required by the safety standard. For the final production samples, the additional markings which do not give rise to misunderstanding may be added.
2. Label is attached on the side surface of enclosure and visible after installation
3. Labels of other models are as the same with HYD 20KTL-3PH's except the parameters of rating.

Test item particulars :
Classification of installation and use : User
Supply Connection : Permanent connection
..... :
Possible test case verdicts:
- test case does not apply to the test object : N/A
- test object does meet the requirement : P (Pass)
- test object does not meet the requirement : F (Fail)
Testing :
Date of receipt of test item : Mar. 23, 2020
Date (s) of performance of tests : Mar. 23, 2020 to June 08, 2020
General remarks:
"(See Enclosure #)" refers to additional information appended to the report. "(See appended table)" refers to a table appended to the report. The tests results presented in this report relate only to the object tested. This report shall not be reproduced except in full without the written approval of the testing laboratory. List of test equipment must be kept on file and available for review. Additional test data and/or information provided in the attachments to this report. Throughout this report a <input type="checkbox"/> comma / <input checked="" type="checkbox"/> point is used as the decimal separator. Determination of the test results includes consideration of measurement uncertainty from the test equipment and methods.
Manufacturer's Declaration per sub-clause 4.2.5 of IEC 62040-1:
The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided..... : <input type="checkbox"/> Yes <input checked="" type="checkbox"/> Not applicable
When differences exist; they shall be identified in the General product information section.
Name and address of factory (ies) : Dongguan SOFAR SOLAR Co., Ltd. 1F - 6F, Building E, No. 1 JinQi Road, Bihu Industrial Park, Wulian Village, Fenggang Town, Dongguan City.

General product information:

Brief description:

The PCE under test (EUT) is Hybrid Inverter. During inverter, which convert the variable DC power generated from the photovoltaic (PV) arrays and Batteries to the stable utility AC power which can be fed into the commercial electrical grid. When charging, the grid converts the alternating current into direct current into the battery through the Hybrid Inverter.

The PCE under test is three-phase Hybrid Inverter for solar power generation with the rating of 10kW, 15kW and 20kW.

The external circuit breakers or fuses for PV array, Batteries and Grid connection are required which the statements are provided in the installation manual.

The models of HYD 5KTL-3PH, HYD 6KTL-3PH, HYD 8KTL-3PH, HYD 10KTL-3PH, HYD 15KTL-3PH, and HYD 20KTL-3PH are identical on topological schematic circuit diagram and control solution codes.

The difference between each other as following table:

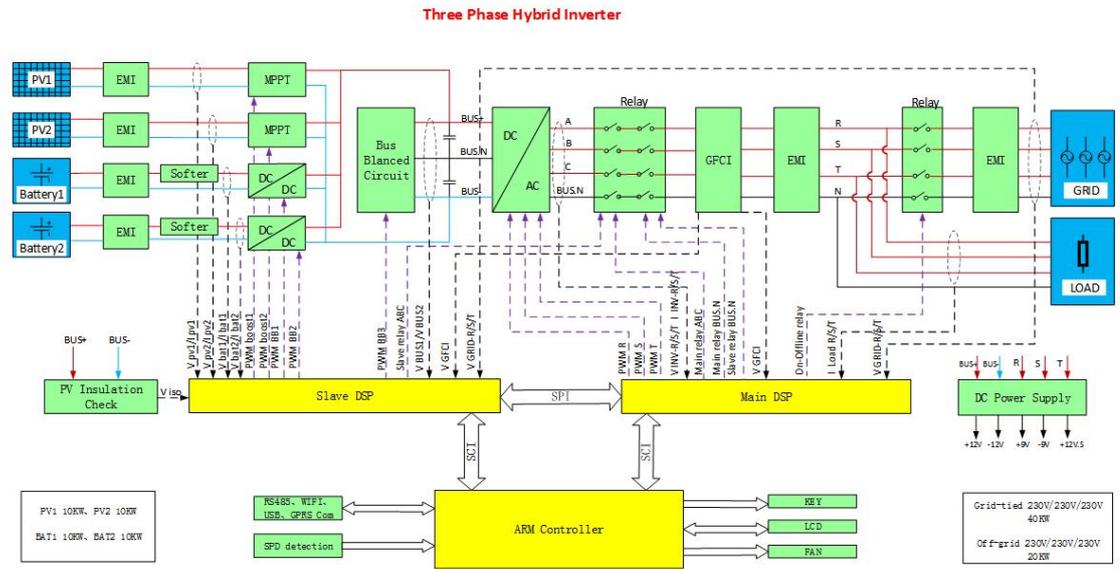

Unless otherwise specified, all the tests were conducted on the basic model of HYD 20KTL-3PH.

The PCE does not provide galvanic separation between the PV array, Batteries and Grid connection circuit (Non-isolation or transformer-less type).

The Grid connection circuit can be switched off by two relays in series for the redundant protection. When single-fault occurs to one relay, the other redundant one will still maintain the basic insulation between PV array, Batteries and Grid connection to the mains. All the relays have functional self-checking before the PCE starting.

M	Ventilation of battery compartments	N/A
	<p>The required dimension for the ventilation openings will be calculated with the following formula:</p> $A \geq Q/360 \text{ [m}^2\text{]}$ <p>with $Q = 0.054 * n * I * C$</p> <p>where:</p> <p>Q : airflow in m³/h n : number of battery cells I : constant factor (0,2A/100Ah for valve regulated lead acid batteries) C : is the battery nominal capacity in Ah at the 10h discharge rate</p> <p>With the specific data for the UPS the following dimension for the ventilation openings is required:</p> <p>n : C :</p> $A \geq (0.054 * n * 0.2 A/100 Ah * C)/360$ $A \geq \text{m}^2$	
	Verdict	
	The size of ventilation openings in battery cabinet exceeds the required airflow by far (as well as the UPS).
